

My dream Job

BY: Christian Hamersley

What's your dream job? My dream job is to become an engineer. Here are three steps on how I can become an engineer. My first step is to obtain a bachelor's degree. Then my second step is to pass the fundamentals of engineering. And step 3 is to complete relevant work.

Step one is to obtain a bachelor's Degree by enrolling in a four year bachelors program at a university or college, ensuring the program is accredited by the Accreditation Board for Engineering and Technology known as (ABET). Then I should focus on a strong foundation in math and science courses, such as calculus and physics, in high school and throughout my degree.

Step two to pass fundamentals of engineering after passing the bachelor's degree I can take and pass the F.E exam. The exam is the first step towards professional licensure and will allow me to become an Engineer in Training known as (EIT).

Last and final step three is to complete relevant work experience and pass the P.E exam. Then I must work under the supervision of a licensed Engineer for at least four years to gain experience. Once I have met the work experience requirements. I can take and pass the professional Engineer exam known as the P.E exam to become a fully licensed professional Engineer!

I want to become an engineer because I can make stuff and weld too! We need more engineers in the world so we can get stuff fixed. Those are my three steps on how I can become an Engineer in the future.
